## News You Can Use

### Learn how to recognize Dutch Elm Disease and how to prevent it!

What is Dutch Elm Disease? It's a deadly disease that affects all species of elm trees and is caused by a fungus that is then spread by beetles. Symptoms include: leaves suddenly wilting, leaves changing colour and shriveling but not falling, and discolouration once the bark is peeled back.

It's only legal to prune elms in Alberta between October 1 to March 31. Pruning outside of this range can attract Elm Bark Beetles to your otherwise healthy tree, infecting it.

If you think your tree may be infected or need more information, visit [sprucegrove.org/DutchElmDisease](https://sprucegrove.org/DutchElmDisease).
